

CLAIM AMENDMENTS

Listing of Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A method for enabling the sending of messages to a recipient via any of a number of messaging systems of different types, the method comprising:

storing addresses for said recipient, at least one address being selectively identified by said recipient as a preferred address for communication with said recipient;

receiving recipient availability information from said messaging systems;

interpreting said recipient availability information so as to determine in which of said messaging systems said recipient is currently available, wherein said recipient is considered to be available in at least said messaging system associated with said preferred address;

receiving an originator input including an identification of said recipient, wherein said originator input further includes a message;

~~choosing an address among the stored addresses, which address is associated with a messaging system in which said recipient is currently available; and~~

identifying at least the messaging system associated with the preferred ~~chosen~~ address; and

sending said message to said recipient via at least said messaging system associated with said preferred address.

2. (Currently Amended) The method according to claim 8 [[1]], wherein one of said messaging systems is a cellular mobile system and said recipient availability information includes an indication of whether a mobile unit of said recipient is available or not.

3. (Original) The method according to claim 2, wherein said indication of whether said mobile unit of said recipient is available or not is an indication of whether said mobile unit of said recipient is attached to said cellular mobile system or not, further comprising:

determining that said mobile unit of said recipient is available if said mobile unit of said recipient is attached to said cellular mobile system; and

determining that said mobile unit of said recipient is not available otherwise.

4. (Original) The method according to claim 3, wherein said indication of whether said mobile unit of said recipient is attached to said cellular mobile system or not is received from a Home Location Register in said cellular mobile system.

5. (Original) The method according to claim 3, wherein said indication of whether said mobile unit of said recipient is attached to said cellular mobile system or not is received from a Visitor Location Register in said cellular mobile system.

6. (Currently Amended) The method according to claim 8 [[1]], further comprising:
sending a Short Message Service message to said mobile unit of said recipient via a Short Message Service Center in said cellular mobile system;
determining that said mobile unit of said recipient is available if an acknowledgement is received from the Short Message Service Center within a time limit; and
determining that said mobile unit of said recipient is not available otherwise.
7. (Cancelled)
8. (Currently Amended) The method according to claim 1, ~~wherein said originator input further includes a message,~~ further comprising:
choosing a second address among said stored addresses, which second address is associated with a messaging system in which said recipient is currently available; and
sending said message to said recipient via the messaging system associated with said second ~~chosen~~ address.
9. (Original) The method according to claim 1, wherein said originator input is received as a voice input, further comprising converting said voice input to text.

10. (Currently Amended) The method according to claim 8 ~~[[9]]~~, wherein the originator ~~input further includes a message~~, further comprising:

determining the type of message, text or voice, used in the messaging system associated with said second chosen address; and

sending said message as said determined type of message to said recipient via the messaging system associated with said second chosen address.

11. (Currently Amended) The method according to claim 8, wherein the messaging system associated with said second chosen address is a cellular mobile system, said second chosen address is a mobile phone number of a mobile unit of said recipient, and the message is sent as a Short Message Service message via said cellular mobile system.

12. (Currently Amended) The method according to claim 8, wherein the messaging system associated with said second chosen address is an e-mail system, said second chosen address is an e-mail address of said recipient, and the message is sent as an e-mail via said e-mail system.

13. (Currently Amended) The method according to claim 10, further comprising:
receiving a reply message from said recipient as said determined type of message via the messaging system associated with said second chosen address;
converting said reply message to voice if said reply message is a text message.

14. (Currently Amended) A system for enabling the sending of messages to a recipient via any of a number of messaging systems of different types, comprising:

first interface means connected to said messaging systems;

second interface means for receiving an originator input including an identification of said recipient, said originator input further including a message;

third interface means for receiving recipient availability information from said messaging systems;

memory means for storing addresses for said recipient, at least one address being selectively identified by said recipient as a preferred address for communication with said recipient;

first processing means for choosing ~~[[an]]~~ at least said preferred address of the stored addresses, and for identifying at least the messaging system associated to the ~~chosen~~ preferred address; and

second processing means for interpreting said recipient availability information so as to determine in which of said messaging systems said recipient is currently available, wherein said recipient is considered to be available in at least said messaging system associated with said preferred address;

wherein said first processing means are operatively connected to said second processing means, and said first interface means are arranged to send said message to said recipient via at least said messaging system associated with said preferred address and ~~arranged to choose an address among the addresses associated with said messaging systems in which said recipient is currently available.~~

15. (Currently Amended) The system according to claim 21 ~~[[14]]~~, wherein one of said messaging systems is a cellular mobile system and said third interface means are arranged to receive recipient availability information including an indication of whether a mobile unit of said recipient is available ~~[[on]]~~ or not.

16. (Original) The system according to claim 15, wherein said third interface means are arranged to receive said indication of whether said mobile unit of said recipient is available or not as an indication of whether said mobile unit of said recipient is attached to said cellular mobile system or not, and said second processing means are arranged to determine that said mobile unit of said recipient is available if said mobile unit of said recipient is attached to said cellular mobile system and to determine that said mobile unit of said recipient is not available otherwise.

17. (Original) The system according to claim 16, wherein said third interface means are arranged to receive said indication of whether said mobile unit of said recipient is attached to said cellular mobile system or not from a Home Location Register in said cellular mobile system.

18. (Original) The system according to claim 16, wherein said third interface means are arranged to receive said indication of whether said mobile unit of said recipient is attached to said cellular mobile system or not from a Visitor Location Register in said cellular mobile system.

19. (Currently Amended) The system according to claim 21 [[14]], wherein said third interface means are further arranged to send a Short Message Service message to said mobile unit of said recipient via a Short Message Service Center in said cellular mobile system, and said second processing means are arranged to determine that said mobile unit of said recipient is available if an acknowledgement is received from the Short Message Service Center within a time limit and to determine that said mobile unit of said recipient is not available otherwise.

20. (Cancelled)

21. (Currently Amended) The system according to claim 14, wherein said ~~originator~~ input further includes a message, first processing means are arranged to choose a second address among said addresses associated with said messaging systems in which said recipient is currently available and said first interface means are arranged to send said message to said recipient via the messaging system associated with said second ~~chosen~~ address.

22. (Currently Amended) The system according claim 21 [[18]], wherein said second interface means are arranged to receive said originator input as a text message, further comprising:
fourth interface means for receiving said originator input as a voice input; and
converting means for converting said voice input to text, said converting means being connected to said second and said fourth interface means.

23. (Currently Amended) The system according to claim 22, wherein said first processing means are further arranged to determine the type of message, text or voice, used in the messaging system associated with said second ~~chosen~~ address, and said first interface means are arranged to send said message as the determined type of message to said recipient via the messaging system associated with said second ~~chosen~~ address.

24. (Currently Amended) The system according to claim 21, wherein the messaging system associated with said second ~~chosen~~ address is a cellular mobile system, said second ~~chosen~~ address is a mobile phone number of a mobile unit of said recipient, and said first interface means are further arranged to send said message as a Short Message Service message via said cellular mobile system.

25. (Currently Amended) The system according to claim 21, wherein the messaging system associated with said second ~~chosen~~ address is an e-mail system, said second ~~chosen~~ address is an e-mail address of said recipient, and said first interface means are further arranged to send the message as an e-mail via said e-mail system.

26. (Cancelled)

27. (Cancelled)

28. (Currently Amended) The system according to claim 24 ~~[[23]]~~, wherein said first interface means are further arranged to receive a reply message from said recipient via one of said messaging system, and said converting means are further arranged to convert said reply message to voice if said reply message is a text message.

29. (Currently Amended) A computer readable medium having computer-executable instructions for performing the steps of:

storing addresses for a said recipient, at least one address being selectively identified by said recipient as a preferred address for communication with said recipient;

receiving recipient availability information from said messaging systems; and

interpreting said recipient availability information so as to determine in which of said messaging systems said recipient is currently available, wherein said recipient is considered to be available in at least said messaging system associated with said preferred address;

receiving an originator input including an identification of said recipient, wherein said originator input further includes a message;

~~choosing an address among the stored addresses, which address is associated with a messaging system in which said recipient is currently available; and~~

identifying at least the messaging system associated with the preferred ~~chosen~~ address; and

sending said message to said recipient via at least said messaging system associated with said preferred address.

30. (Cancelled)

31. (Currently Amended) The computer readable medium according to claim 29 having further computer-executable instructions for performing the steps of:

choosing a second address among said stored addresses, which second address is associated with a messaging system in which said recipient is currently available ~~receiving an originator input including a message to said recipient;~~ and

sending said message to said recipient via the messaging system associated with the second ~~chosen~~ address.
